

Beginner Cam Model Course

# Safety & Privacy

The importance of protecting your safety on the internet

# Course Overview

1. **Why security is so important**
2. **Developing a Security Protocol**
  - a. Contact Information
  - b. Your Camming Space
  - c. Social Media
  - d. Amazon
  - e. While Camming
  - f. Geo-Blocking
  - g. VPN
  - h. Content Distribution
3. **Conclusion**

Welcome!

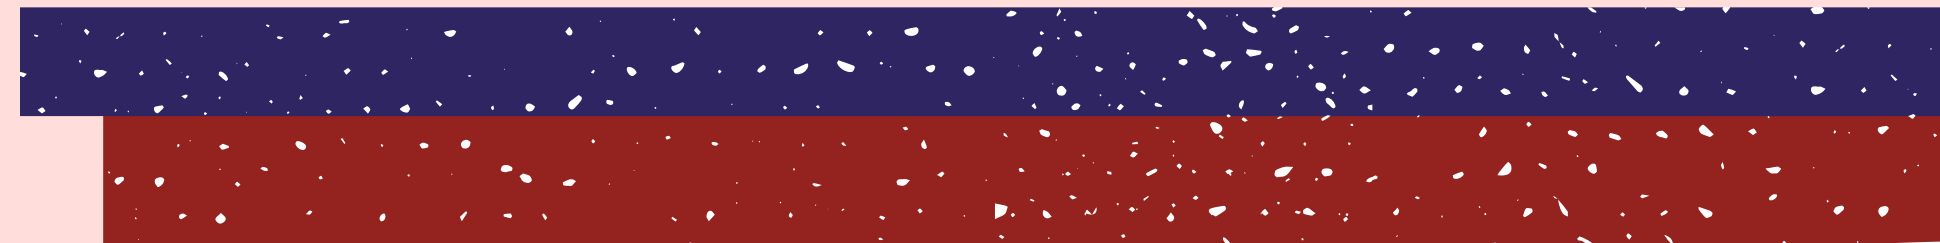

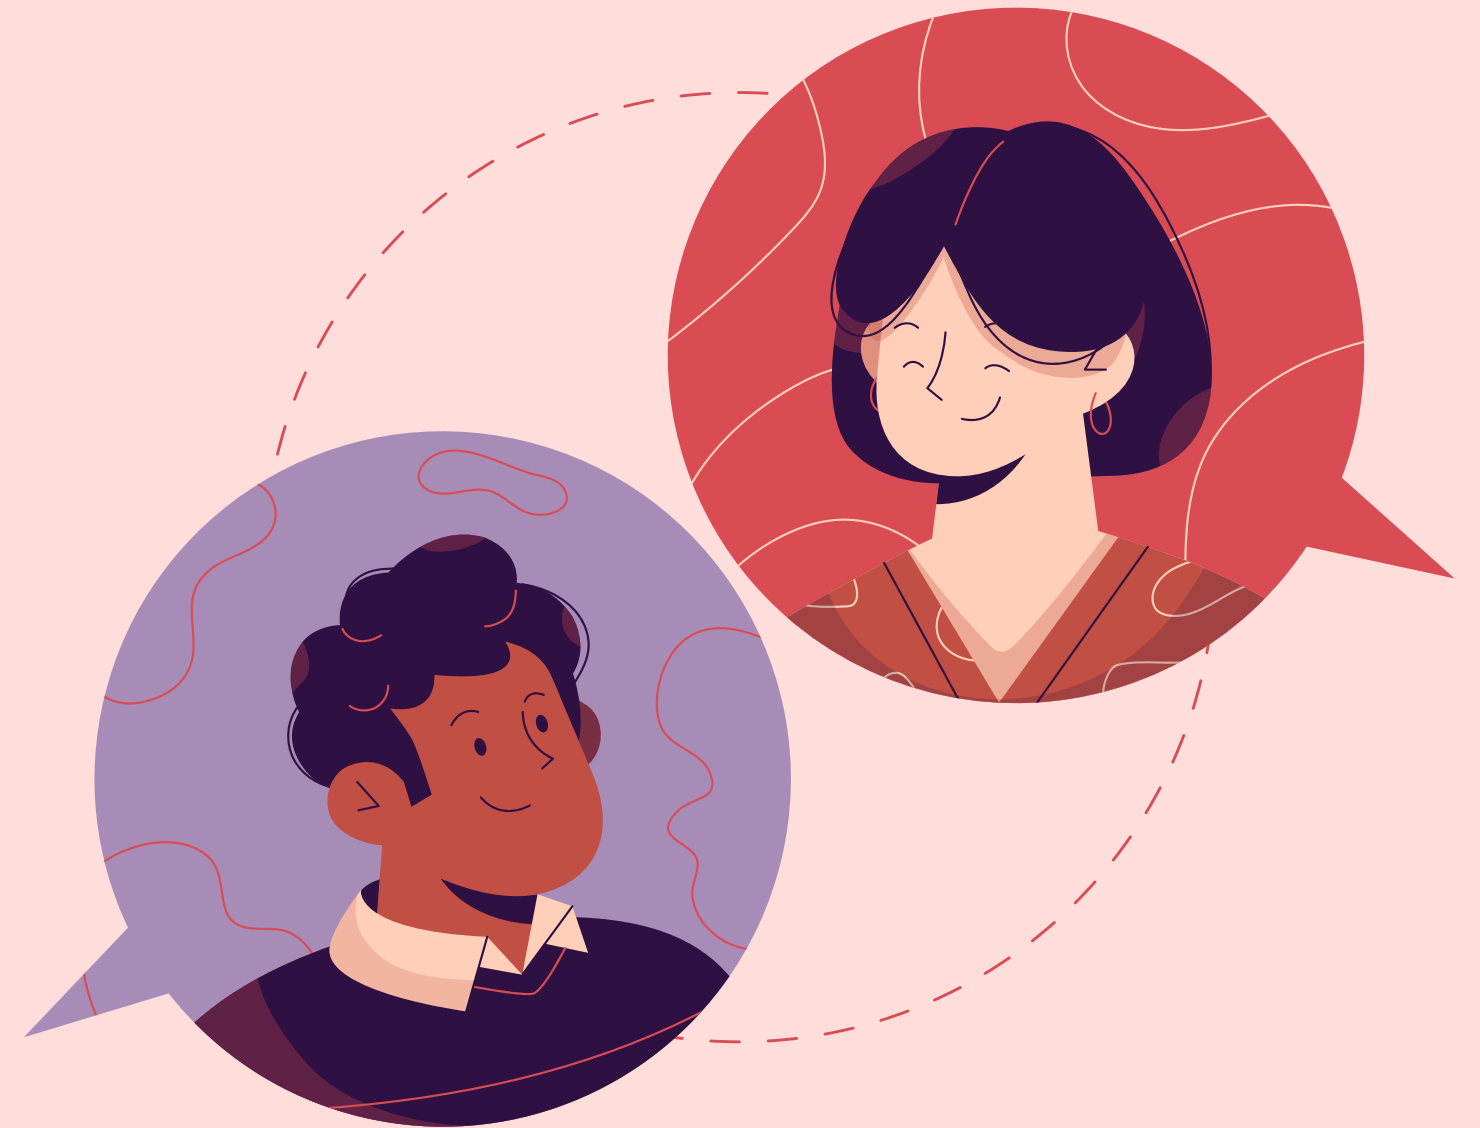

# Why is security so important?

## \*YOUR PROTECTION!\*

There are numerous ways for your security and privacy to be compromised, many of which are surprising.

Developing a security protocol and sticking to strict privacy settings are important no matter what stage you are in your cam model career.

Implementing a security protocol will help you be protected from stalkers, harassers, doxxers, and blackmailers.

It will also help you hide your cam identity from family/friends/employers if you want.

# Developing a Security Protocol

**THAT EVERY CAM MODEL NEEDS.  
NO EXCEPTIONS.**

# Use Different Contact Information

Keep your work and personal life separate. Set up and use an email address and phone number just for your camming accounts – this includes social media & Amazon.

Recommended Apps/Services:

TextPlus (free)

Burner (paid)

ProtonMail (free)

# Anonymize Your Camming Space

Evaluate each and every item that is in your camming frame. Ensure that nothing is visible that could convey information related to your off-cam life. This includes photographs, books, posters, etc. BE THOROUGH!

Ensure that windows in the background are covered so that it is not discernable where you are.

# Social Media

Use separate social media accounts for your camming persona and for your private life. Set your personal accounts to private.

Be cautious about using the same outfits or the same backgrounds on social media and in your camming pictures – someone could make the connection.

Do not use photos or videos from your personal life in your camming work. People can reverse search them and find your real identity.

Never list your real name or address to receive gifts from Amazon. It is possible for the seller or shipping company to provide the buyer with your address, as they are a third party. The buyer may also be able to contact the seller or shipping company for this information.

Obtain a PO Box that is far away enough from your actual physical address and use a fake name with it. For the US, a UPS box, rather than a USPS, is recommended for their strict privacy measure. Ask the UPS store to allow packages to your 'alias' for anonymity purposes.

# Your Amazon Wishlist

Gift cards are another option. You will only need an e-mail address to receive an Amazon gift card – always use your cam e-mail.

However, unless you spend 100% of the gift card, the sender can request a refund through Amazon. Therefore, you should keep this in mind when accepting – think about who is sending it to you, and if you have items you can purchase immediately.

# Your Amazon Wishlist

# While Camming

Be careful about what you say while you are camming. This includes talking about your time zone, favorite restaurant, upcoming events, local street names, your alma matter, etc. Basically, ask yourself: “could someone figure out my location through this information?” Over the course of camming, dropping little hints here and there, viewers can piece together where you are.

# While Camming

Do not click on any unfamiliar links that are sent in a chatroom. They can potentially lead to a virus, or even worse, can disclose your IP address and location to the sender. Be extra cautious of any link-shortening URLs, like bit.ly

Do not accept any PayPal transactions. It is against PayPal's terms to use their service for adult work. More importantly, PayPal exposes your details to the sender. In other words, your payment sender will be able to see your name and details provided on the PayPal account.

# Geo-Blocking

Certain cam sites offer the opportunity to block geographical areas from being shown your streams. That way you can block viewers that are geographically close to you or the state that you have family and friends living in. Each site has different geo-blocking capabilities, so make sure to check your account settings.

However, if a viewer is using a VPN, regional blocking will not work, as VPNs change their IP address to look like they're located somewhere else.

A Virtual Private Network (VPN) is something that obscures your IP address. IP addresses are linked to geographical location, so anyone who can view your IP address can determine where you live.

There are both paid and free VPN subscriptions available that offer varying levels of security. Popular options are:

Express VPN (Paid)

Astrill (Paid)

ProtonVPN (Free)

# VPN

Cam sites make you sign an agreement before you are allowed to perform. READ THIS VERY CAREFULLY. Most state that any video streamed on the site will become the property of the cam site itself. This means that legally, anything you do or say on the site is their property and they may use it in whatever way they wish to.

This means that a private session can be used for advertising purposes in video pop-ups or website banners to direct traffic to their site.

# The Rights to Your Content

If you find videos of you on free tube sites, that were not uploaded by you but rather by members that illegally recorded them, contact your cam site and ask them to send a notice to remove it. Unfortunately, recording cam shows, whether public or private, does happen.

However, sometimes cam sites will allow illegally recorded videos to stay up for the purpose of advertising. Make sure you have a thorough understanding of your contract, so you know your next steps if this happens to you.

# The Rights to Your Content

Certain private cam sites allow you to watermark your content – both images and broadcasts. This will allow a lot greater control over your online presence, in case your videos end up on a tube site.

If the above happens, contact your site administrators to contact the tube site to take down the video. If nothing happens, file a DMCA complaint indicating that your copyrights have been violated.

If you have a hard time finding the administration information, go to [netsol.com](https://www.netsol.com) and do a simple WHOIS search.

# Protecting Your Content

# Conclusion

Integrating these measures into a security protocol will decrease your chances greatly of your viewers finding you, as well as those in your life finding your cam identity.

However, it is important to note that none of these measures have a 100% guarantee. No matter what precautions you take to maintain your privacy, there is always the risk of friends, family, and acquaintances finding you online. Make sure you're okay with the fact these people may know about your camming career before jumping in.
